	RP2781S	Ovarian Protection, Small		

Made in Germany

RP278 – Ovarian X-Ray Protection for Female Patients

The concept of this MAVIG ovarian shield is unsurpassed and meets all the requirements of radiological practice. Radiation exposure of the female gonads is significantly reduced without compromising the diagnostic technique.

For optimal fine adjustment, each model can be varied again by means of the modular principle. The RP278 is, of course, easy to clean and disinfect. A complete set* offers you the best possible protection for all your supine patients.
